Luis Lázaro Pimentel

Software Engineer · Multiplatform Application Development (DAM), Backend & Cybersecurity

Madrid, Spain | luislazaropimentel@gmail.com | +34 626 01 57 23 | luislazaro-dev.netlify.app | github.com/Thepimen | linkedin.com/in/luis-lázaro-pimentel

PROFESSIONAL SUMMARY

Software developer specialized in software engineering, multiplatform applications (DAM), backend systems, and cybersecurity. Previous **university studies in Engineering** provided a rigorous foundation in **low-level C programming, manual memory management, computational logic, discrete mathematics, and algorithm design**. Currently combining these core fundamentals with hands-on enterprise application development (2nd year Higher Diploma in DAM at Instituto Nebrija). Consistent professional track record since 2023 at **Cambridge Assessment English** coordinating operational security under strict international audit standards. **Accredited Level B2 in English via APTIS ADVANCED (British Council)** with professional technical fluency.

KEY TECHNICAL PROJECTS

VulnFollowUp · DevSecOps & DORA Compliance Platform (github.com/Thepimen/VulnFollowUp) — *Java 17 REST, Android (Room Offline-First), TypeScript/JS SPA (WCAG 2.1 AA), SQL, CVSS v3.1/v4.0*

- Enterprise vulnerability management and operational resilience platform aligned with EU DORA (Regulation EU 2022/2554).
- Automated CVSS v3.1/v4.0 validation engine, RBAC authentication with BCrypt/Argon2, concurrent Java backend, and offline-first Android client.

kshield · Linux Kernel eBPF Observability Sentinel (github.com/Thepimen/kshield) — *C, eBPF CO-RE (BTF), Go (userspace daemon), Linux Internals, Clang/LLVM, Docker*

- Kernel-space intrusion detection and observability agent with measured CPU overhead under 1.5% using eBPF CO-RE probes written in C.
- Instruments *sys_enter_execve*, *sys_enter_connect*, and *sys_enter_openat* tracepoints via zero-copy BPF Ring Buffers to a Go daemon.

ShadowAudit · Distributed Vulnerability & Network Scanner (github.com/Thepimen/ShadowAudit) — *TypeScript, Next.js, Express, Python, Redis, Docker, Nmap, Raw Sockets*

- Decoupled microservices architecture: Express API gateway orchestrating Redis task queues to isolated Python workers.
- Hybrid scanning engine combining low-level Raw Sockets with structured Nmap multi-stage sweeps.

NanoKV · Distributed Key-Value Prototype (github.com/Thepimen/NanoKV) — *Go, Consistent Hashing (FNV-1a), Sharding with Virtual Nodes, Write-Ahead Log (WAL)*

- Lightweight distributed key-value prototype built in Go to explore consistent hashing with virtual nodes and append-only WAL crash recovery.

πDiaDownloader · Native Desktop Media Pipeline (github.com/Thepimen/PiDiaDownloader) — *Python 3.11+, CustomTkinter, yt-dlp, FFmpeg, PyInstaller*

- Native multi-threaded desktop utility for local high-fidelity DASH/HLS audio and video muxing with zero watermarks or third-party tracking.

EDUCATION

Higher Diploma (CFGS) in Multiplatform Application Development (DAM) — *2025 – Present*
Instituto Nebrija (Vocational Education & Training) — *Madrid, Spain*

- Core Modules: Data Access (SQL/JDBC), Services & Process Concurrency (sockets, threads), Android Development (PMDM), Interface Design, ERP/Odoo.

University Foundation in Software Engineering — *2023 – 2025*
University Degree Level Studies in Engineering — *Madrid, Spain*

- Solid grounding in low-level programming (C, pointers, manual heap allocation), data structures & complexity, discrete mathematics, computational logic, operating systems, and computer networks.

WORK EXPERIENCE

Exam Supervisor & Operational Logistics Coordinator — *2023 – Present*
Cambridge Assessment English — *Madrid, Spain*

- Safeguarding, custody, and transportation of confidential examination materials under strict international security and audit standards.
- Coordinating invigilator teams and resolving live hardware/network incidents during computerized exam sessions in high-pressure environments.

TECHNICAL STACK & CERTIFICATIONS

Proficient Languages:	C (low-level & memory), Java (Spring Boot), TypeScript, JavaScript, Python, SQL, Bash.
Foundational / Familiar:	Go (syntax and fundamentals applied to prototypes and background daemons).
Fullstack & Mobile:	Native Android (Room/SQLite), Node.js, Express, Next.js, React, WebSockets, REST APIs, Redis, PostgreSQL, MySQL.
Systems & Security:	Linux (Ubuntu/Debian, WSL 2), Docker, Docker Compose, Git, eBPF (CO-RE), Raw Sockets, Wireshark, Nmap, Wazuh XDR.
Languages & Credentials:	**English: Level B2 Accredited — APTIS ADVANCED (British Council)**. Professional and operational fluency. · **Spanish:** Native.
